CLASS COMPUTER FOR THOROUGHBRED RACEHORSES

(FLAT TRACK RACING)

MODEL R/S-1

KEL.CO BY APF

This computer is designed specifically to provide an accurate and rapid means for computing the established class ratings for thoroughbred racehorses. When these ratings are used, together with the basic set of rules, as carefully outlined in our instruction manual, the user has at their disposal a statistically proven handicapping method. This method requires absolutely no prior knowledge of handicapping principals. With this race track computer, the user is now given a statistical edge, that extra ingredient, necessary for successful wagering. For the first time the novice, as well as the professional, has the opportunity to choose the horses which have the ability of finishing in the money.

The simplicity of the computer is exemplified by the fact that it needs only 6 imputs of information for each horse in the race. All the information necessary is listed in daily conventional racing forms.

"YOU'LL COME OUT A WINNER"™

Comes complete with 9 volt battery and AC Adaptor
Dimensions: W 2-3/4" X L 5-1/2" X H 7/8"
Packing: 6/24
